AMENDMENTS TO THE SPECIFICATION

Please replace paragraph [0028] of U.S. Patent Application Publication 2006/0147911 ("the '911 publication") with:

FIG. 1 shows in section 1 the cell diameter before the cells were suspended for density gradient centrifugation using a hyper-osmolarity buffer. The cell diameter is on average 8.02 μm. Compared with this, FIG. 2b shows the cell diameter after Immersion in a hyper-osmolarity buffer such as Nyoprop NYCOPREPTM (13% (w/v) Nycodenz, 0.58% (w/v) NaCl, and 5 mM Tricine-NaOH pH 7.4 in H₂O) or Polymorphprop POLYMORPHPREPTM (13.8% (w/w) Diatrizoate and 8% (w/v) dextran 500 in H₂O). The average diameter was reduced to 4.97 μm.

Please replace paragraph [0056] of the '911 publication with:

1. Gradient separation with PolymorphpropTM POLYMORPHPREPTM (13.8% (w/w) Diatrizoate and 8% (w/v) dextran 500 in H₂O) and NycopropTM NYCOPREPTM (13% (w/v) Nycodenz, 0.58% (w/v) NaCl, and 5 mM Tricine-NaOH pH 7.4 in H₂O)

Please replace paragraph [0063] of the '911 publication with:

a) Start with 3 ml PolymorphprepTM POLYMORPHPREPTM (13.8% (w/w) Diatrizoate and 8% (w/v) dextran 500 in H₂O) (gradient) (density 1.113, Nycomed)

Please replace paragraph [0064] of the '911 publication with:

b) Carefully overly with 3 ml NycoprepTM NYCOPREPTM (13% (w/v) Nycodenz, 0.58% (w/v) NaCl, and 5 mM Tricine-NaOH pH 7.4 in H₂O) (gradient) (density 1.068)
